

Online-Colouring of claw-free graphs by using
the strategy of First-Fit

Patrick Holz

Diplomarbeit im Fach Informatik

Themasteller: Prof. Dr. E. Speckenmeyer

vorgelegt in der Diplomprüfung
im Studiengang Wirtschaftsinformatik
der Wirtschafts- und Sozialwissenschaftlichen Fakultät
der Universität zu Köln

Contents

1	Introduction	1
1.1	Structure and aims of the thesis	1
1.2	Clarifying used terms	2
1.2.1	Graph Colouring	2
1.2.2	Claw-free graphs	4
1.2.3	Online-Algorithms	4
1.2.4	First-Fit-Strategy	6
2	General bounds for colouring claw-free graphs	8
2.1	Concretizing the problem of graph-colouring to claw-free graphs	8
2.1.1	Some interesting properties of claw-free graphs	8
2.1.2	Some approximations of $\chi(G)$ for offline-algorithms	11
2.1.3	Considerations about the validity of these approximations in the online context	19
2.2	Known bounds for the chromatic number $\chi_{OnFF}(G)$ of claw-free graphs	21

3	A short excursus: Unit disk graphs	27
3.1	Motivation	27
3.2	Online-colouring of unit disk graphs	28
3.2.1	A geometrical constraint	28
3.2.2	Further considerations	30
4	Interval graphs	32
4.1	Definition of interval graphs	32
4.2	Colouring interval graphs online	34
4.2.1	Interval graphs as a subclass of perfect graphs	34
4.2.2	Estimations of $\chi_{OnFF}(G)$ for the class of interval graphs	35
5	Proper-interval graphs: An interesting subclass of interval and claw-free graphs	44
5.1	How we define proper- and unit-interval graphs	44
5.2	The relationship between proper- and unit-interval graphs	46
5.3	Determining $\chi_{OnFF}(G)$ for proper-interval graphs	47
6	Conclusion	49
